

Network Based Emergency Notification Switches provide unparalleled flexibility and control. With the availability of either Wi-Fi or PoE switches, optimal placement is achieved at key locations throughout your facility. Network Based Software provides for easy control by any authorised personnel to define the purpose of the switch and the accompanying pre-recorded message.

Features:

- Easy Mounting Options
- Lift Cover to Prevent Accidental Activation
- Power and Status LED
- Customisable Alerts and Events
- Integration with Wi-Fi and PoE Platform Products
- AC Power or Power over Ethernet

Key Benefits:

Panic Buttons can be mounted virtually anywhere, thereby giving full discretion on placement.

Customisation Permits Preset Alarm Configuration so that you can elicit the correct response to the Emergency.

Integration with PoE Speakers and Message Boards to deliver Audible and Visual Notifications.

Network Based Windows Software allowing for Easy Control, Monitoring and Periodic Testing.
